

Swivel Bulls Eye with Cams

We have taken a Barton favourite and brought it right up to date. Featuring a newly designed swivel and profiled swivel arm, the Swivel Bullseye is now fitted with a unitary bullseye leading to a Kevlar K Cam and top fairlead.

Overall the unit is 45 grams lighter than its predecessor and rotates even more easily. It's ideal for cabin top control lines up to 12mm where adjustability from any angle is required, such as the kicking strap on a race boat, jib sheets on a pocket cruiser or spinnaker boom downhaul.

Part Number:

42601
